Colitis (Chronic Ulcer Hemorrhagic Colitis)

Hyperbaric Oxygenation as a part of the Treatment of Chronic Ulcer Hemorrhagic Colitis

Summary

34 patients with chronic ulcerohemorrhagic colitis in exacerbation were treated with hyperbaric oxygenation in addition to the routine therapy. The total course of treatment included 10-12 seances with 60-75 min. exposition each. All patients improved significantly after the first 5-6 seances. The results of the treatment back up the use of hyperbaric oxygenation in the treatment of chronic ulcer hemorrhagic colitis.
