Treatment of ischemic cerebrovascular accidents with Hyperbaric Oxygenation

[Lecba ischemickych mozkovych cevnich prihod hyperbaroxii.]
Berger J; Emmerova M; Hadravsky M; Kratky M; Vetrovcova J; Berkova E Neurologicka klinika FN Plzen.

The authors present eleven year's experience with comprehensive treatment of patients who suffered an ischemic cerebrovascular attack. This comprises so-called conventional treatment of cerebrovascular attacks and also hyperbaroxia, i.e. administration of oxygen under high partial pressure. The authors used a therapeutic pressure of 0.2 MPa for 90 minutes in individual exposures. Of 31 treated patients 23 improved, i.e. 76%; eight improved slightly, eight significantly and seven substantially. The condition of the remainder did not change.

Conclusion:

Hyperbaric Oxygen Therapy should therefore be used everywhere where this method is available.
